Illingworth & Rodkin Opens New Office in Denver, Colorado

Denver, CO – October 10, 2014 – Illingworth & Rodkin (I&R), a consulting firm with over 27 years of experience in acoustics, noise and vibration engineering, and air quality management, has opened a new office located at 1615 California Street, Suite 614, Denver, CO 80202, Phone: 720-306-8322. The Denver office will be managed by Senior Consultant, Dana Lodico. Ms. Lodico has over 14 years of experience consulting with a background in civil engineering and architectural acoustics.

Ms. Lodico has worked in Denver for several years, consulting on a wide range of acoustics, noise and vibration projects. Additionally, she has authored or co-authored more than 25 technical papers and presentations on transportation noise and architectural acoustics. Several papers on tire/pavement noise research were co-authored with Paul Donovan, Principal at I&R and past President of the Institute of Noise Control Engineers. “Our decision to formally expand into Denver is to increase our ability to provide on-site services in the Rocky Mountain region leveraging our West Coast operations as needed,” states Dr. Donovan. “We are excited about the potential of this new office in such a growing and incredibly vibrant metro area.”

Colorado has recently been experiencing broad-based growth in not just energy, but natural resources, mining, oil and farm production. It had the country’s fourth fastest rate of population growth last year, driving activity in residential building. Hiring in business services, healthcare, as well as state and local governments has also risen. Dr. Donovan adds, “We look for opportunities to provide our current and future clients the superior service which I&R is reputed to offer.”

About Illingworth & Rodkin

I&R has grown to become a respected leader in the fields of acoustics, noise control engineering, and air quality management. Consultants combine a strong theoretical and thorough empirical approach to finding solutions for clients in the public and private sectors.

I&R has conducted over 4,500 proprietary studies and offers world-class consulting services in the following:

Environmental studies (residential, recreational, commercial, industrial)

Community noise planning

Transportation noise studies

Architectural acoustics

Underwater & marine acoustics

Tire/pavement noise

Air quality control
